# ELAPSED TIMES FOR HEROD THE GREAT IN JOSEPHUS

*Andrew E. Steinmann and Rodger C. Young*

## ABSTRACT

*Determining the chronology of Herod the Great, as given in Josephus, involves many factors: consular years, Sabbatical years, Nisan or Tishri years regarding Herod's reign, inclusive or non-inclusive counting for elapsed time, and the year from which Herod's sons considered their reigns to have begun. The present article focuses on just two of these issues—elapsed time and Nisan versus Tishri years—as dealt with in the two most frequently cited positions formulated for the death of Herod, those of Schürer and Filmer. Tables at the end demonstrate which of the two views best agrees with the many designations of elapsed time in Josephus.*

OVER THE MANY YEARS IN WHICH THE CHRONOLOGY of Herod the Great has been discussed, the two positions that have found the most advocates are first, those associated with the name of Emil Schürer,<sup>1</sup> holding for a 4 BC date for the death of Herod, and second, those associated with the thesis of W. E.

---

Andrew E. Steinmann is Distinguished Professor of Theology and Hebrew at Concordia University Chicago, River Forest, Illinois; Rodger C. Young is an independent researcher in St. Louis, Missouri.

<sup>1</sup> Emil Schürer, *A History of the Jewish People in the Time of Jesus Christ*, 5 vols., trans. John Macpherson (1890; reprint, Peabody, MA: Hendrickson, 2009). Among the many who accept Schürer's date of 4 BC for the death of Herod are Don Blosser, "The Sabbath Year Cycle in Josephus," *Hebrew Union College Annual* 52 (1981): 124–39; Paul L. Maier, "The Date of the Nativity and the Chronology of Jesus' Life," in *Chronos, Kairos, Christos: Nativity and Chronological Studies Presented to Jack Finegan*, ed. Jerry Vardaman and Edwin M. Yamauchi (Winona Lake: Eisenbrauns, 1989), 113–19; Douglas Johnson, "And They Went Eight Stades toward Herodeion," in *Chronos, Kairos, Christos*, 93–99; Raymond Jachowski, "The Death of Herod the Great and the Latin Josephus: Re-examining the Twenty-second Year of Tiberius," *Journal of Greco-Roman Christianity and Judaism* 11 (2015): 9–18.

Filmer,<sup>2</sup> who put the death of Herod in early 1 BC. Although various other positions have been advocated, such as those that put the death of Herod in 5 BC,<sup>3</sup> these will not be dealt with in the present article, since the majority of scholarship in the past hundred years has aligned with the basic outlines of either the Schürer chronology or that of Filmer. Recognizing that other scholars have contributed significantly to both sides of this debate, rather than speaking of the “Schürer consensus” and the “Filmer hypothesis,” these two positions are referred to as the “consensus view” and the “minority view” in what follows, since there is no dispute over the fact that, at the present time, the majority of scholars take the first or “consensus” view.

### WORKING ASSUMPTIONS OF THE TWO PRIMARY APPROACHES TO THE CHRONOLOGY OF HEROD

The two positions have fundamentally different assumptions that they use to explain the information found in Josephus that bears on the chronology of Herod’s life. For the consensus view, these assumptions are the following:

- Unless Josephus states otherwise (for instance, in referring to years of the Olympiad, or to Roman consular years), the calendar year is assumed to begin in Nisan (March/April). Since in what follows it will be important to distinguish a Nisan-based year from one that starts in January (our system and that of the Romans), any such year will be written as the BC year in which Nisan occurred, followed by an “n” to indicate that the year being considered is not a Julian year, but a Jew-

<sup>2</sup> W. E. Filmer, “Chronology of the Reign of Herod the Great,” *Journal of Theological Studies* 17 (1966): 291–93. Those who accept Filmer’s 1 BC for the death of Herod include Ormond Edwards, “Herodian Chronology,” *Palestine Exploration Quarterly* 114 (1982): 29–42; Paul Keresztes, *Imperial Rome and the Christians: From Herod the Great to About 200 A.D.* (Lanham, MD: University Press of America, 1989): 1–43; Ernest L. Martin, *The Birth of Christ Recalculated*, 2nd ed. (Pasadena, CA: Foundation for Biblical Research, 1980); Ernest L. Martin, “The Nativity and Herod’s Death,” in *Chronos, Kairos, Christos*, 85–92; Jack Finegan, *Handbook of Biblical Chronology*, rev. ed. (Peabody, MA: Hendrickson, 1998), 284–91, §486–500 and table 139; Andrew E. Steinmann, “When Did Herod the Great Reign?,” *Novum Testamentum* 51 (2009): 1–29.

<sup>3</sup> Among those who place Herod’s death in 5 BC are Timothy Barnes, “The Date of Herod’s Death,” *Journal of Theological Studies* 19 (1968): 204–9 (although Barnes says 4 BC would also be acceptable); Daniel R. Schwartz, *Studies in the Jewish Background of Christianity* (Tübingen: Mohr/Siebeck, 1992), 157–62; Elias Bickerman, *From Ezra to the Last of the Maccabees: Foundations of Postbiblical Judaism* (New York: Schocken), 185.

ish year that started in Nisan.<sup>4</sup> The importance of this more exact notation will appear in what follows. The consensus view places Herod's capture of Jerusalem in 37n.

- Josephus, in measuring elapsed time, uniformly used inclusive numbering, also called nonaccession reckoning. If Josephus says that Herod reigned thirty-seven years after his investiture by the Romans, this means that only thirty-six actual years had passed, since Herod's first partial year is to be reckoned as a full year in the count. In order to clarify how this works in formulae showing elapsed time, the "actual" elapsed time will be used with "(actual)" following so that the formula is unambiguous. Thus when Josephus says that Herod died thirty-four years after he had Antigonus slain,<sup>5</sup> his date of death is to be calculated as  $37n-33$  (actual) =  $4n$ , that is, at some time in the year beginning on Nisan 1 of 4 BC.<sup>6</sup>
- The Sabbatical-year calendar in effect at this time is taken as that of Benedict Zuckermann, in which a Sabbatical year began in the fall of 38 BC, consistent with the statement in *Antiquities* 14.475/14.16.2 that a Sabbatical year was in effect while Herod and Sossius were besieging Jerusalem.<sup>7</sup> Since Sabbatical years began in Tishri (the fall), this conjectured Sabbatical year may be written as 38t; its latter six months overlapped the first six months of 37n, during which the siege took place, according to the consensus view.

---

<sup>4</sup> The convention of expressing dates advocated here, which may be called the "Nisan/Tishri" notation, is similar to that introduced by Valerius Coucke in the 1920s: V. Coucke, "Chronologie biblique," in *Supplément au Dictionnaire de la Bible*, vol. 1, ed. Louis Pirot (Paris: Libraire Letouzey et Ané, 1928): cols. 1245–1279. Instead of placing the 'n' and 't' immediately after the BC year, he placed the letters before, followed by a period and a space.

<sup>5</sup> *Ant.* 17.192/17.8.1; *War* 1.655/1.33.8.

<sup>6</sup> That the notation introduced here is not just a matter of pedantry should be apparent when compared to the usual way of expressing these dates, whereby Herod's death is calculated as thirty-three years after 37 BC, and hence at some time in 4 BC. Assuming that Josephus was thinking in terms of regnal years, and therefore the number of years was important, this means that Herod's death in the consensus calculation was not just at any time from January 1 of 4 BC and the start of Passover on Nisan 14 of that year, but must be confined to a thirteen-day interval between Nisan 1 and Nisan 14. The importance of this distinction will be brought out in Section §11.

<sup>7</sup> Benedict Zuckermann, *A Treatise on the Sabbatical Cycle and the Jubilee: A Contribution to the Archaeology and Chronology of the Time Anterior and Subsequent to the Captivity Accompanied by a Table of Sabbatical Years*, trans. A. Löwy (London: Chronological Institute, 1866).

- The consular years given by Josephus for Herod's investiture by the Romans, and, three years later, his capture of Jerusalem, are accepted as correct. These correspond to the Julian years (starting January 1) of 40 BC and 37 BC, respectively.
- Herod's successors dated their reigns in a de facto sense; those reigns started in 4 BC, placing Herod's death in that year.

The minority view (Filmer and others) uses the following working assumptions:

- Unless Josephus states otherwise (for instance, in referring to years of the Olympiad, or to Roman consular years), the calendar year is assumed to begin in Tishri (Sept/Oct). Herod's siege of Jerusalem began in the spring of 36 BC, which was in the Tishri-based year 37t. It ended on the Day of Atonement ("the fast") exactly twenty-seven years ("on the same day") after its capture by Pompey in 63 BC,<sup>8</sup> i.e., on Tishri 10, 36 BC. This was nine days after the beginning of the calendar year 36t. His investiture by the Roman Senate was in 39t.<sup>9</sup>
- Josephus, in measuring elapsed time, uniformly used noninclusive numbering, also called accession reckoning. Thus, when Josephus says that Herod reigned thirty-four years after the capture of Jerusalem, this means thirty-four actual years, and his date of death is to be calculated as  $36t - 34 = 2t$ , which agrees with his dying shortly after the full lunar eclipse of January 9/10, 1 BC.
- The Sabbatical-year calendar in effect at the time of Herod's siege of Jerusalem is taken as that of Ben Zion Wacholder, in which a Sabbatical year began in the fall of 37 BC, consistent with the statement in *Antiquities* 14.475/ 14.16.2 that a Sabbatical year was in effect during the siege of Jerusalem in the summer of 36 BC.<sup>10</sup>

---

<sup>8</sup> *Ant.* 14.487/14.6.4.

<sup>9</sup> In order for Herod's investiture by the Romans to be in 39t, it would have to be on or after Tishri 1 of that year, i.e., after September 20. An inscription from Aphrodisias in Asia Minor records a decree from Antony, Octavius, and the Senate dated October 2, 39 BC (Joyce Reynolds, *Aphrodisias and Rome* [Hertford: Stephen Austin and Sons, 1992], 70, 74–75). All the principal actors involved in giving Herod the kingship were therefore in place in early 39t.

<sup>10</sup> Ben Zion Wacholder, "Calendar of Sabbatical Cycles during the Second Temple and the Early Rabbinic Period," *Hebrew Union College Annual* 44 (1973): 153–96.

- The consular years given by Josephus for Herod's investiture by the Romans and, three years later, his capture of Jerusalem are incorrect, and accepting them as correct has led to conflict with many other statements in Josephus for those who follow the consensus view. In the same sentence in which Josephus gives the consular year for Herod's investiture by the Romans, he gives the wrong Olympiad year,<sup>11</sup> a fact acknowledged by Schürer.<sup>12</sup> If Josephus (or, more probably, his source) had the wrong Olympiad year, this would also make his consular year open for questioning. In addition, Appian's *Civil Wars* (5.8.75) implies that Herod's investiture was in the consular year corresponding to 39 BC.<sup>13</sup>
- Two of Herod's successors, Archelaus and Antipas, antedated their reigns to 4 BC (i.e., 4t) because that was when they were given governing authority by Herod;<sup>14</sup> their de facto reigns began in 1 BC. The case of Philip is problematic, because various early texts of Josephus place his starting year as 1 BC, not 4 BC.

It is evident that Josephus had a continuing interest in dating events according to elapsed time, as is shown in the passages listed below, which are related to the life of Herod and are taken from his *Antiquities* and *War*. Josephus writes of the passage of years as measured from the Hasmonean period, from well-established events in Roman history, or from events in Herod's life. In the following discussion, a comparison will be made of the dates for these elapsed times when measured with the assumptions of the consensus view (elapsed times are by inclusive reckoning) or with those of the minority view (noninclusive reckoning).

These findings about elapsed times in Josephus need to be viewed in light of the larger discussion of issues related to the chronology of the intertestamental period, such as the Sabbatical-year calendar, the question of whether Herod's successors antedated their reigns, and the validity of Josephus's consular dates for

---

<sup>11</sup> *Ant.* 14.487/14.16.4. Josephus places Herod's appointment during the one hundred and eighty-fourth Olympiad, which ended on June 30, 40 BC. He also states that Calvinus and Pollio were consuls when Herod was appointed.

<sup>12</sup> Schürer, *History* 1.393, n. 3.

<sup>13</sup> Filmer, "Reign of Herod," 285; Steinmann, "When Did Herod the Great Reign?" 7.

<sup>14</sup> *War* 1.625/1.32.2, 1.631–632/1.32.3. See also the fuller discussion in Steinmann, "When Did Herod the Great Reign?" 20–25.

Herod's appointment as king by the Romans and his capture (with Sossius) of Jerusalem. These correlated questions are not the subject of the present study, but it is hoped that future discussions that deal with these topics will take into account the conclusion reached here that, whatever other positions are advocated related to the chronology of Herod the Great, due consideration must be given to the evidence that Josephus, in his presentation of that chronology, *uniformly used noninclusive reckoning*, as opposed to the inclusive reckoning employed to support the consensus view.

### TISHRI YEARS

More needs to be said about one of the assumptions held by the minority position, namely that Josephus always reckoned Herod's regnal years as starting in Tishri, not in Nisan as in the consensus view. Support for the consensus position is almost always derived from the statements in the Mishnah and Talmud<sup>15</sup> that Nisan 1 was the New Year for kings and festivals.<sup>16</sup> There is no restriction in these statements to the post-Exilic period, and, since much if not most of the discussion in the Mishnah and Talmud relates to interpretation of biblical passages, they were clearly intended to include kingship during the time of the First Temple. In that regard, the Mishna and Talmud are plainly wrong. Coucke and Thiele have shown, from relevant biblical texts, that the southern kingdom of Judah used regnal years starting in Tishri.<sup>17</sup> Instead of relying on the later traditions of the Mishnah and the Talmud, at least some consideration should have been given to the possibility that Herod and Josephus would have been acquainted with the reckoning of the kings of Judah and would have used their calendar in determining when a king's year started.

---

<sup>15</sup> *m. Roš Haš. 1; b. Roš Haš. 1a.*

<sup>16</sup> "It used to be assumed that Herod and his successors counted their regnal years according to a spring era, from 1 Nisan, but—as successive editions of Schürer's handbook show somewhat amusingly—this was never more than an assumption based on rabbinic law. But the relevance of that law to Herod is more than doubtful." Schwartz, *Studies*, 174.

<sup>17</sup> Coucke, "Chronologie Biblique," cols. 1264–1265; Edwin Thiele, *The Mysterious Numbers of the Hebrew Kings*, 3rd ed. (Grand Rapids: Zondervan/Kregel, 1983), 51–53. The most obvious use of Tishri years in ancient Judah is found at 2 Kings 22:3–23:23. Josiah began repairing the temple in his eighteenth year. Finances were raised and workmen were gathered from throughout the land for the project. Nisan came and the Passover was celebrated. However, even after Passover, it was still Josiah's eighteenth year, meaning that the new year did not begin in Nisan. Thus, Josiah's eighteenth year began instead on the first day of Tishri.

Josephus deals with this question in a passage that is often cited in support of a Nisan-based year. However, closer examination will show that the passage says just the opposite: Josephus meant for us to understand that he used Tishri-based years for kings. Near the beginning of *Antiquities*, as if to inform us of what kind of calendar will be used in what follows, Josephus mentions the two calendar systems used by his people, the one starting the year in Nisan and the other in Tishri (*Ant.* 1.81/1.3.3). After relating that Moses instituted Nisan as the first month for festivals and “everything related to divine worship,” he continues:

ἐπὶ μέντοι γε πράσεις καὶ ὠνάς καὶ τὴν ἄλλην διοίκησιν τὸν πρῶτον κόσμον διεφύλαξε

“concerning, however, buying (πράσεις) and selling (ὠνάς) and the other financial administration [or tax administration] (διοίκησιν) he [Moses] preserved the earlier arrangement.”

The lexicons give the meaning of διοίκησις as “administration, management,”<sup>18</sup> or “control, government, administration, treasury department.”<sup>19</sup> There is no meaning of “ordinary affairs” as rendered by Whiston and later Thackeray. By using the word διοίκησις, Josephus clearly meant that the affairs of government (administration) were according to a Tishri-based calendar, and it is unfortunate that Thackeray apparently followed Whiston in rendering this Greek word in English.<sup>20</sup> Josephus was stating that all activities other than those related to divinely mandated religious observances would be reckoned by a fall calendar that started with the first day of Tishri.

#### INDIVIDUAL PASSAGES SHOWING JOSEPHUS’S TREATMENT OF ELAPSED YEARS

Passages below are introduced with a section marker of the form “§1” so that, in later discussions, only the section marker need be

<sup>18</sup> Walter Bauer et al., *Greek-English Lexicon of the New Testament and Other Early Christian Literature*, 2nd ed. (Chicago: University of Chicago, 1979).

<sup>19</sup> H. G. Liddell et al., *A Greek-English Lexicon*, 9th ed. (Oxford: Clarendon Press, 1996).

<sup>20</sup> Schwartz, *Studies*, 174, realized what Josephus intended: “Josephus, at any rate, states in *Ant.* 1.80–81 that 1 Tishri remained the New Year for all purposes apart from religious ones.”

given instead of repeating the references to the associated passages in *Antiquities*, *War*, and elsewhere. This will be particularly useful in the tables at the end. Those tables are meant to provide a convenient summary derived from the more thorough discussion in the relevant sections and to give prominence to the different results produced by adopting the consensus assumption of inclusive dating throughout Josephus (first table) versus the minority assumption of noninclusive counting (second table).

(§1) HASMONEAN DYNASTY OF 6 PRIESTS LASTED 79 YEARS; TOTAL OF INDIVIDUAL REIGNS AGREES<sup>21</sup>

The Hasmonean dynasty is reckoned from Simon becoming high priest in 170 S.E.<sup>22</sup> (142n) to its end when Pompey captured Jerusalem in 63 BC, a span of seventy-nine years. Years given in Josephus are: Simon, eight years; Hyrcanus I, thirty-one years; Aristobolus, one year; Alexander Janneus, twenty-seven years; Alexander's governorship, nine years; Aristobolus, three-and-a-half years, for a total of seventy-nine-and-a-half years. If these numbers were by inclusive reckoning, one year would need to be subtracted from each figure to represent the actual length of reign, giving seventy-three-and-a-half (actual) years. In light of this evidence that Josephus used noninclusive reckoning, the consensus view necessarily must say that this case is an exception to the general rule. There is no contradiction and no special pleading of this sort needed by the minority view, which holds that Josephus always used noninclusive reckoning, except when an ordinal number is used.

(§2) ABOUT 45 YEARS FROM HEROD'S APPOINTMENT AS στρατηγός BY THE ROMANS UNTIL HIS DEATH<sup>23</sup>

"Herod was appointed, by Sextus Caesar, governor of Coele-Syria. . . . All this happened in B.C. 47, or in the beginning of B.C. 46."<sup>24</sup> At that time he was twenty-five years of age.<sup>25</sup> He was about seventy when he died,<sup>26</sup> allowing the following calculations for the year of his death:

---

<sup>21</sup> This argument is presented in Filmer, "Reign of Herod," 292.

<sup>22</sup> S.E. = Seleucid Era.

<sup>23</sup> *Ant.* 17.148/17.6.1; *War* 1.231/1.10.8.

<sup>24</sup> Schürer, *History*, 1.384.

<sup>25</sup> Although most texts of *Ant.* 14.158/14.9.2 read "fifteen years of age," it is generally thought that the fifteen is a copying error for twenty-five.

<sup>26</sup> *Ant.* 17.148/17.6.1.

Consensus:  $47n + 25 - \sim 70 = \sim 2n$ . Does not fit 4n consensus year for Herod's death.

Minority:  $47t + 25 - \sim 70 = \sim 2t$ . Agrees with Herod dying in early 1 BC

(§3) IN HEROD'S 3RD YEAR SINCE HE WAS MADE KING BY ROMANS, WHEN WINTER WAS OVER, HEROD AND SOSSIUS BEGAN THE SIEGE OF JERUSALEM<sup>27</sup>

The use of the ordinal here, "the third year," necessarily implies inclusive numbering in either system of reckoning. The Greek and English languages use ordinals in the same way when inclusive reckoning is intended. Inclusive numbering then implies 38n in the consensus view, and 37t in the minority view.<sup>28</sup> Josephus says that the siege lasted for five months<sup>29</sup> and the city was captured "in the solemnity of the Fast;"<sup>30</sup> that is, on the Day of Atonement. Since the Day of Atonement was in Tishri, the siege, according to the data from Josephus, began in Iyyar of the same year that the consensus view holds was the year of the siege, 37n (Iyyar is the month after Nisan). But this contradicts the 38n for Herod's third year of the consensus view; the consensus view is self-contradictory. There is no problem with the minority view that starts Herod's third year in Tishri of 37t and accepts the start of the siege in Iyyar of 36 BC.

Consensus:  $40n - 2$  (actual) = 38n. Does not work; see discussion.

Minority:  $39t - 2$  (actual) = 37t. Agrees with Josephus: siege started in Iyyar, 36 BC.

(§4) AFTER HEROD "HAD COMPLETED THE 17TH YEAR OF HIS REIGN," AUGUSTUS CAESAR CAME TO SYRIA<sup>31</sup>

Dio Cassius (*Roman History* 54.7.4–6) says that Augustus spent the winter in Samos, "and in the spring of the year when Marcus Apuleius and Publius Silius were consuls, he went on into Asia,

<sup>27</sup> *Ant.* 14.465/14.15.14; *War* 1.343/1.17.8.

<sup>28</sup> Thackeray's translation in the Loeb series is inaccurate: "it being now just three years since he had been proclaimed king in Rome." The Greek is Συνήγето δ' αὐτῷ τρίτον ἔτος ἐξ οὗ βασιλεὺς ἐν Ῥώμῃ ἀπεδέδεικτο. "Τρίτον ἔτος" is ordinal: "third year."

<sup>29</sup> *War* 1.160/1.18.2.

<sup>30</sup> *Ant.* 14.287/14.6.4. The Greek word is νηστείας, the same word used in Acts 27:9 to refer to the Day of Atonement. There is no reason to accept any of the various alternatives that have been offered in interpreting what Josephus meant.

<sup>31</sup> *Ant.* 15.354/15.10.3.

and settled everything there and in Bithynia.” The consular year was 20 BC. Herod had completed his seventeenth year of reign, so Caesar came in his year 18. In order for this to agree with the consensus dates for Herod, the consensus view measures Herod’s eighteenth year from his capture of Jerusalem in 37n, giving  $37n - 17$  (actual) =  $20n$ . However, the next section will show that the eighteenth year should be measured, not from the year in which Herod and Sossius captured Jerusalem, but from Herod’s investiture by the Romans three years earlier. In the minority view, there is no conflict with the requirement that the time is to be measured from Herod’s investiture by the Romans in 39t.

Consensus:  $40n - 17$  (actual) =  $23n$ . Does not fit coming of Augustus in 20 BC.

Minority:  $39t - 18 = 21t$ . Fits Augustus coming before Tishri 1, 20 BC.

(§5) HEROD BEGAN WORK ON THE TEMPLE IN HIS 15TH YEAR, ALSO CALLED HIS 18TH YEAR<sup>32</sup>

After relating the coming of Augustus to Syria in *Antiquities*, Josephus says that, still in the eighteenth year of his reign, Herod began work on the temple. In the corresponding passage in *War*, Herod starts construction of the temple in year 15 of his reign. As pointed out by Filmer,<sup>33</sup> there is no conflict when we understand that the three-year difference is the number of years between Herod’s appointment as de jure king by the Romans, versus when he became king de facto in the conquest of Jerusalem. Consequently, unless we are to charge Josephus with an error when there is a logical and natural explanation for his using two different figures, it must be held that the consensus view that measures the eighteenth year of Herod in this passage from the capture of Jerusalem is in error and Josephus, in *War*, does not contradict what he says about the same event in *Antiquities*. For the “15 year” figure, then,

Consensus:  $37n - 14$  (actual) =  $23n$  for start of temple construction (does not work).

Minority:  $36t - 15 = 21t$ . Agrees with start of construction before Tishri, 20 BC.

---

<sup>32</sup> *Ant.* 15.380/15.11.1 (18th year); *War* 1.401/1.21.1 (15th year).

<sup>33</sup> “Reign of Herod,” 296. See also Andrew E. Steinmann, *From Abraham to Paul: A Biblical Chronology* (St. Louis: Concordia, 2011), 229.

(§6) JERUSALEM FELL TO HEROD TWENTY-SEVEN YEARS, TO THE DAY, AFTER IT FELL TO POMPEY IN 63 BC<sup>34</sup>

Inclusive numbering, using the principle that a part of a year counts as a whole year, cannot be used here; there was no extra part of a year.

Consensus:  $63n - 27 = 36n$ . Conflicts with consensus date of 37n.

Minority:  $63t - 27 = 36t$ . Agrees with capture of Jerusalem in 36t.

(§7) HASMONEAN GOVERNMENT CAME TO AN END “AFTER (μετά) 126 YEARS”<sup>35</sup>

1 Macc 6:58, 59 (Lysias speaking, at end of the siege of Beth-Zur, in 150 S.E. = 162n): “now therefore let us be friends with these men, and make peace with them, and with all their nation; and covenant with them, that they shall live after their laws, as they did before: for they are therefore displeased and have done all these things, because we abolished their laws.” This marks the reasonable beginning of the Hasmonean government, although strife continued for a few years. The use of μετά (after) requires noninclusive counting,<sup>36</sup> so that a full 126 years had elapsed from this date until the Hasmonean government ceased when Antigonus was deposed.

Consensus:  $162n - 126 = 36n$ . Does not agree with consensus date of 37n.

Minority:  $162n - 126 = 36n$ . Agrees (1 Macc 6 uses Seleucid Nisan-based years).

(§8) ARISTOBOLUS WAS HIGH PRIEST FOR “ONE YEAR ONLY”<sup>37</sup>

Aristobolus was installed on the same day that Herod and Sossius captured Jerusalem, usually taken as the Day of Atonement. He

---

<sup>34</sup> *Ant.* 14.487/14.16.4. Josephus recognizes something fatalistic about the coincidence that Jerusalem fell the second time “twenty-seven years to the day after the first tieme.” Josephus’s use of “after” (μετά) also indicates that the twenty-seven years are to be measured in a noninclusive sense; a full twenty-seven years had passed.

<sup>35</sup> *Ant.* 14.190/14.16.4.

<sup>36</sup> There is no evidence that the temporal use of μετά means anything other than “after” or “following.” See Bauer et al., *Greek-English Lexicon*; Liddell et al., *Greek-English Lexicon*; Lust, et al., *A Greek-English Lexicon of the Septuagint* (Stuttgart: Deutsche Bibelgesellschaft, 2003).

<sup>37</sup> *Ant.* 15.56/15.3.3.

was murdered after the Feast of Tabernacles in the following year. Only one “new year” occurred during his high priesthood, by either Nisan or Tishri reckoning.

Consensus: by inclusive reckoning, he should be given two years; does not work.

Minority: the assumed accession (noninclusive) reckoning agrees with Josephus.

(§9) BATTLE OF ACTIUM (SEPT. 2, 31 BC) OCCURRED IN THE 7TH YEAR OF HEROD<sup>38</sup>

Although the *Antiquities* and *War* passages use the ordinal, “seventh year” of Herod for when the Battle of Actium took place, in accession reckoning this does not imply inclusive numbering. In the accession-year system, a king’s “first year” was the year after his “zero” or accession year, and his seventh year would be a full seven years after the accession year. This is amply demonstrated for the regnal years of the divided monarchy and also in Babylonian and Assyrian official records.<sup>39</sup> Tishri 1 in 31 BC was on September 21, so that the Battle of Actium took place toward the end of Herod’s seventh Tishri-based year, 32t BC.

A curiosity of this particular statistic is that the consensus view also seems to work, although to do so it must take Herod’s starting year as the year in which he conquered Jerusalem, rather than the year in which he was appointed as king by the Romans that is the more common starting place in Josephus. The compound errors of the consensus view (wrong starting year, wrong use of a Nisan calendar, and wrong use of inclusive numbering) cancel each other out to give the correct time for the battle. The fact that the consensus formula seems to work cannot be used to disprove the minority view, however, because the minority view also gives the correct date for the Battle of Actium, and it starts from a more probable starting date.

Consensus:  $37n - 6$  (actual) =  $31n$ . This is acceptable; Battle of

<sup>38</sup> *Ant.* 15.121/15.5.2; *War* 1.370/1.19.3.

<sup>39</sup> In Section §3, the construction δ' αὐτῷ τρίτον ἔτος ἐξ οὗ βασιλεὺς ἐν Ῥώμῃ ἀπεδέδευτο, can be translated as “It was his third year from when he was proclaimed king in Rome.” This is not counting accession or nonaccession, but factual, i.e., counting from (ἐξ) when Herod was actually proclaimed king (βασιλεὺς . . . ἀπεδέδευτο). The difference in terminology is critical; Josephus’s reference there is not to the third year of Herod’s *reign* (βασιλεία), but the third year *from* the time he was proclaimed *king* (βασιλεὺς).

Actium Sept. 21, 31 BC.

Minority: 39t – 7 = 32t. Agrees; Battle of Actium Sept. 21, 31 BC.

(§10) HASMONEANS RULED 125 YEARS<sup>40</sup>

This was a statement of Herod on his deathbed, according to Josephus. See reference §6, where the more exact figure is given as 126 years. If these were the actual words of Herod (not very likely), then we do not expect a dying man to be overly concerned with an exact chronology. If the words are the invention of Josephus, he can be given credit for a realistic portrayal of a man in distress for whom a meticulous chronology would seem artificial. In any event, the 125 years does not fit either approach exactly, and the 126 years is what should be taken seriously. Nisan Seleucid years should be assumed, consistent with usage in 1 Maccabees.

Consensus: 162n – 124 (actual) = 38n. Does not agree with consensus 37n for the death of Antigonus.

Minority: 162n – 125 = 37n. Does not agree with minority 36n/37t for the death of Antigonus.

(§11) HEROD REIGNED 34 YEARS AFTER ANTIGONUS WAS SLAIN, BUT 37 YEARS AFTER HE WAS DECLARED KING BY THE ROMANS<sup>41</sup>

Although the consensus view calculates 4n for the death of Herod in both cases, there is a problem with this date that is usually glossed over by those who support the consensus.<sup>42</sup> Assuming that Josephus was accurate in his designation (and his repeated use of elapsed times throughout the reign of Herod indicates he intended to be), then Herod had to die in the short time between Nisan 1, 4 BC, and the Passover that began thirteen days later (Nisan 14). During those thirteen days, the following events took place:

- Word was sent from Jericho to Jerusalem to gather the vast

---

<sup>40</sup> *Ant.* 17.162/17.6.3.

<sup>41</sup> *Ant.* 17.192/17.8.1; *War* 1.655/1.33.8.

<sup>42</sup> In the extensive charts that Schürer uses to display the chronology of Herod, dates are given in terms of AUC and BC years, thus obscuring the difficulty of the narrow timeframe for Herod's death. In a long footnote beginning on *History* page 1.464 and continuing to page 465, he devotes one sentence to the problem. After citing the Mishnah and the Talmud that say that New Year for kings was on 1 Nisan, he writes, "If this be so, the thirty-fourth year of Herod would begin on the 1st Nisan of the year B.C. 4, and Herod must in that case have died between 1st and 14th Nisan, since his death occurred before the Passover."

amount of wealth and funeral trappings that would be part of the funeral procession and burial. The accumulation of this wealth, for which “Archelaus omitted nothing of magnificence therein,”<sup>43</sup> must have taken a day at least, probably more. After the material had been accumulated, it was sent to Jericho to use in preparing the body for burial. Even if the magnificence of the event was exaggerated, a state funeral of this type would have required considerable effort in preparation. The minimum time for these events would be three days.

- After the body was prepared for burial and the cortège organized, the body was taken to Herodium, where it was buried. “[T]he time needed for the procession and for the final ceremony in Herodium would be no less than three days.”<sup>44</sup>
- A seven-day period of mourning followed.<sup>45</sup>
- After the period of mourning, Archelaus gave a feast for the multitude. After the feast, he went to the temple and gave an oration to the people that was well received.<sup>46</sup> This could all have happened on the same day, one day after the mourning period.
- However, the mood of the crowd soon changed, at the instigation of agitators. It was demanded that those responsible for the death of those who had pulled down the golden eagle in front of the temple be punished,<sup>47</sup> and that Joazar, who had been appointed high priest by Herod because of his support of Herod in this incident, be removed from office. Archelaus acceded to this latter request. All of this must have taken at least one day after the initial time of acceptance by the crowd.
- Archelaus sent his general to address the crowd; he was driven away with stones “as also those who went in after him to call for self-control. Archelaus kept sending in many men, and

<sup>43</sup> *War* 1.671/1.33.9. The events following Herod’s death, including his funeral, are also found in *Ant.* 17.156–191/17.6.3–17.8.1.

<sup>44</sup> Alla Kushnir-Stein, “Another Look at Josephus’ Evidence for the Date of Herod’s Death,” *Scripta Classica Israelica* 14 (1995): 76. Kushnir-Stein explains the necessary logistics to support this statement. Her summary: the date of the Schürer consensus for Herod’s death “leaves less than two weeks for all the events described by Josephus between the king’s death and Passover, which is plainly impossible” (75).

<sup>45</sup> *War* 2.1/2.1.1 (cf. Num 19:11).

<sup>46</sup> *War* 2.2–4/2.1.1–2.

<sup>47</sup> *Ant.* 17.149–167/17.6.2–4.

they [the rebels] answered everything with rage.”<sup>48</sup> Allowing one day for these various embassies would seem to be a minimum.

- The Passover began.<sup>49</sup>

The sum of the various events just described as taking place between the death of Herod and before the start of Passover that year is  $3 + 3 + 7 + 1 + 1 + 1 = 16$ , assuming the extreme minimum time for each event. An excess of days for any one of these events would make the sum greater. But even assuming that Herod obligingly helped the consensus view by dying at the earliest possible time in this period, on Nisan 1, the subsequent events would have gone beyond the start of Passover. The consensus view, with its insistence on Nisan-based years and the death of Herod in 4n, is therefore not credible unless Josephus is entirely discredited with regard to the circumstances of Herod’s death. That position, however, is highly unlikely; all the events he describes are consistent with the magnificence that would be expected for the funeral and the likelihood of the following turmoil. There is no problem, however, with the minority chronology that places the death of Herod at some time shortly after the full lunar eclipse of January 9/10, 1 BC, well before the start of Passover on April 8 of that year.

Consensus:  $37n - 33$  (actual) =  $4n$ . Does not work; events above cannot fit into 13 days.

$40n - 36$  (actual) =  $4n$ . Does not work; events above cannot fit into 13 days.

Minority:  $36t - 34 = 2t$ . Consistent with Herod’s death in early 1 BC.

$39t - 37 = 2t$ . Consistent with Herod’s death in early 1 BC.

(§12) HIGH PRIESTLY REIGNS OF HYRCANUS II AND ANTIGONUS TOTALED 27 YEARS<sup>50</sup>

Hyrcanus II, appointed by Pompey, reigned twenty-four years. He was followed by Antigonus, appointed by the Parthians, who reigned three years and three months, after which he was defeated

<sup>48</sup> *War* 2.9/2.1.3. The translation is from Steve Mason, ed., *Flavius Josephus: Translation and Commentary*, 16 vols. (Leiden: Brill, 1999). The translator for *War* 2 is Mason.

<sup>49</sup> *Ant.* 2.10/2.1.3.

<sup>50</sup> *Ant.* 20.245/20.10.1.

by the armies of Sossius and Herod.<sup>51</sup> The total of twenty-seven years and three months agrees with the total of twenty-seven years given by Josephus for the time between the capture of Jerusalem by Pompey and its capture by Herod<sup>52</sup> (the extra months must be absorbed into the reign of Hyrcanus, whose years are not broken down into years and months). By inclusive reckoning of the consensus assumptions, the total time should be twenty-three actual years for Hyrcanus II, and two actual years three months for Antigonos, a total of twenty-five years plus three months, contradicting the twenty-seven years elapsed time given by Josephus. That the twenty-seven years could be by inclusive numbering (actual twenty-six years) is ruled out by the exactness of the figure, that is, twenty-seven years to the day.

Consensus: 23 (actual) years + 2 (actual) years and 3 months = 25 years and 3 months. Does not work.

Minority: 24 years + 3 years and 3 months = 27 yrs. Possible if extra months are in Hyrcanus's reign.

(§13) TWENTY-EIGHT HIGH PRIESTS, OVER 107 YEARS, FROM THE "TIMES OF HEROD" TO THE DESTRUCTION OF THE TEMPLE<sup>53</sup>

The twenty-eight high priests, as listed in VanderKam<sup>54</sup> and as extracted from the writings of Josephus, must include Antigonos, otherwise there would be only twenty-seven. When Josephus wrote that during "the times of Herod" there were twenty-eight high priests, he therefore started those times with Herod's investiture by the Romans, not with Herod's capture of Jerusalem and deposing of Antigonos. The consensus view, in contradiction to Josephus's use of the phrase, nevertheless starts "the times of Herod" with his capture of Jerusalem in 37n, giving  $37n + AD\ 70n - 1$  (no year zero) = 106 actual years—contradicted, however, by its reckoning only twenty-seven high priests, not twenty-eight.

---

<sup>51</sup> *Ant.* 20.244–245/20.10.4.

<sup>52</sup> *Ant.* 14.488/14.16.4.

<sup>53</sup> *Ant.* 20.250/20.10.5.

<sup>54</sup> James VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* (Minneapolis: Fortress, 2004), 385–487. The difficulty that the twenty-eight high priests and 107 years presents for the consensus theory was first presented by Andrew Steinmann, "When Did Herod the Great Reign?" 25–26. To our knowledge, it has never been answered by proponents of the consensus view. One web-based attempt claimed that, since Antigonos was a king, he was not a priest. This is contradicted by coins minted by Antigonos, in which he called himself both high priest and king.

In *Ant.* 20.246/20.10.4, Josephus says, “The latter [i.e., Antigonus] ruled for three years and three months, following which he was captured after a siege by Sossius and Herod. When he had been taken to Antioch, he was slain by Antony.”<sup>55</sup> It is not clear here what happened after three years and three months: the start of the siege? Capture of Antigonus? His being slain by Antony? The most reasonable interpretation would seem to be his capture. If we assume this was on the Day of Atonement in 37 BC (consensus year), then going back 3 years and 3 months puts the start of his reign in June or July of 40 BC, i.e. in 40n, and the time for the twenty-eight high priests would be 40n BC + AD 70n – 1 (no year zero) = 109 years. This does not work, even with inclusive reckoning. In the minority view, if Antigonus was captured on the Day of Atonement in 36 BC, three years and three months earlier would be June or July of 39 BC, which was in 40t according to the Tishri-based calendar. This formula also does not work for the minority view: 40t BC + AD 69t – 1 (no year zero) = 108 years, not 107.

Was Josephus being inexact here, since neither system comes out to exactly 107 years? Perhaps so, but there is another explanation. In the two places where Josephus gives timespans related to the reign of Antigonus,<sup>56</sup> he measures thirty-four years for Herod “since he had procured Antigonus to be slain.” If the 107 years in the ambiguous passage (*Ant.* 20.246/20.10.4) refers to the same event, then the consensus formula still does not work, but the minority formula, in which it is assumed that Antigonus was sent to Antony and then put to death at least three months after his capture in Tishri of 36 BC, dates Antigonus’s death to 36t.<sup>57</sup> This gives his accession year as 39t, and the formula works out exactly: 39t BC + AD 69t – 1 (no year zero) = 107 years. With this approach, it is not necessary to charge Josephus with inexactness and contradict-

---

<sup>55</sup> *Ant.* 20.246/20.10.4.

<sup>56</sup> *Ant.* 17.191/17.8.1; *War* 1.665/1.33.8.

<sup>57</sup> The Greek is: τρία δ’ ἔτη καὶ τρεῖς μῆνας ἄρξαντα τοῦτον Σόσιος τε καὶ Ἡρόδης ἐξεπολιόρησαν Αντώνιος δ’ ἀνεῖλεν εἰς τὴν Αντιόχειαν ἀναχθέντα (*Ant.* 20:246/ 20.10.4). This suggests, in line with the interpretation just given, that Josephus is terminating the three years and three months with Antigonus’s death at Antony’s hand: “When this one had reigned three years and three months, Sossius and Herod captured him by means of a siege, [though] Antony killed him, [after] having brought him to Antioch.” Thus, the formula would put the start of his reign in Tishri 39 and the end of his reign in Nov/Dec 36, and the calculation would be: 39t BC + AD 69t – 1 (no zero year) = 107 years. Note that Josephus does not move on to Herod’s acts as king until *after* he treats Antigonus’s death. So, at least for Josephus, Herod’s reign does not begin until Antigonus’s execution. This would be in keeping with Josephus’s pro-Hasmonean ideology.

ing his other dates relative to Antigonus and Herod; inexactness was not his problem, though ambiguity was.

Consensus: Wrong, because only twenty-seven high priests are included in the consensus interpretation.

Minority:  $39t + 69t - 1$  (no year zero) = 107 to fall of Jerusalem (a possible interpretation).

### TABLES OF ELAPSED TIMES

The following tables provide a summary of the results of the preceding discussion and a way to allow easy comparison of the consequences of the assumption made regarding Josephus's method of reckoning elapsed time: by inclusive or by noninclusive numbering. In the tables, the presence of a "Yes" in the rightmost column does not necessarily imply that the opposing alternative is wrong; the item might fit both hypotheses because of their underlying assumptions. It will be seen, however, that in all cases except §9, only one alternative agrees with the data as given in Josephus.

Table 1. Formulae for Elapsed Times in the Consensus Approach: Inclusive Reckoning.

Event	Consensus formula	OK?
(§1) 6 Hasmonean rulers from Simon through Aristobolus; total of reigns agrees with 79 years between Simon becoming high priest in 142n and Pompey capturing Jerusalem in 63n.	If inclusive counting is assumed, one year must be subtracted for each of the 6 rulers, giving 73 years.	No
(§2) 45 years from Herod's appointment as στρατηγός in late 47 or early 46 BC, age 25 until his death at age about 70.	$47n + 25 - 70 = 2n$	No
(§3) Herod began siege of Jerusalem in third year (τρίτον ἔτος) after appointment by Romans.	$40n - 2$ (actual) = 38n (not possible, since siege began after Nisan 1, 37 BC).	No
(§4) In Herod's 18th year from appointment as king by Romans, Augustus Caesar comes into Syria (20 BC). Work starts on temple.	$40n - 17$ (actual) = 23n	No
(§5) Work begins on temple in Herod's 15th year, also called his 18th year (see §4).	$37n - 14$ (actual) = 23n $40n - 17$ (actual) = 23n	No

(§6) Jerusalem fell to Herod 27 years, to the day, after it fell to Pompey in 63 BC. Noninclusive counting.	$63n - 27 = 36n$ (conflicts with 37n, consensus date)	No
(§7) Hasmonean government ended “after (μετά) 126 yrs.” μετά requires noninclusive reckoning.	$162n - 126 = 36n$	No
(§8) Aristobolus was HP for “one year only.”	2 years by inclusive reckoning	No
(§9) Battle of Actium was in Herod’s 7th year.	$37n - 6$ (actual) = 31n	Yes
(§10) Herod on his deathbed: Hasmoneans ruled 125 years, to deposing of Antigonus.	$162n - 124$ (actual) = 38n	No
(§11) Herod reigned 34 years after Antigonus was slain, but 37 years after declared king by Romans.	$37n - 33$ (actual) = 4n $40n - 36$ (actual) = 4n	No <sup>58</sup>
(§12) Hyrcanus II, appointed high priest by Pompey in 63 BC, ruled 24 years, followed by Antigonus, 3 years 3 months. Total is 27 years 3 months, agreeing with 27 years from Pompey’s capture of Jerusalem to Herod’s.	Inclusive reckoning would mean 23 actual yrs and 2 actual yrs 3 mo: total 25 yrs 3 mo, contradicting 27 exact yrs.	No
(§13) 28 high priests and 107 years from Antigonus to fall of Jerusalem in AD 70.	$40n$ (BC) + AD 70n – 1 (no year 0) = 109 years	No

**Table 2.** Formulae for Elapsed Times in the Minority Approach: Noninclusive Reckoning.

Event	Minority Formula	OK?
(§1) 6 Hasmonean rulers from Simon through Aristobolus; total of reigns agrees with 79 years between Simon becoming high priest in 142n and Pompey capturing Jerusalem in 63n.	Noninclusive counting shows the numbers agree.	Yes
(§2) 45 years from Herod’s appointment as στρατηγός in late 47 or early 46 BC, age 25, until his death at age about 70.	$47t + 25 - 70 = 2t$	Yes

<sup>58</sup> See the discussion related to §11, showing that the events related to Herod’s death cannot fit into the thirteen days starting with Nisan 1, 4 BC.

(§3) Herod began siege of Jerusalem in third year (τρίτον έτος) after appointment by Romans.	$39t - 2$ (actual) = $37t$	Yes
(§4) In Herod's 18th year from appointment as king by Romans, Augustus Caesar comes into Syria (20 BC). Work starts on temple.	$39t - 18 = 21t$	Yes
(§5) Work begins on temple in Herod's 15th year, also called his 18th year (see §4).	$36t - 15 = 21t$ $39t - 18 = 21t$	Yes
(§6) Jerusalem fell to Herod 27 years, to the day, after it fell to Pompey in 63 BC. Noninclusive counting.	$63t - 27 = 36t$	Yes
(§7) Hasmonean government ended "after (μετά) 126 yrs." μετά requires noninclusive reckoning.	$162n - 126 = 36n$ . (Hasmoneans used Seleucid Nisan reckoning)	Yes
(§8) Aristobolus was HP for "one year only."	1 year, noninclusive reckoning	Yes
(§9) Battle of Actium was in Herod's 7th year (ordinal number).	$39t - 7 = 32t$	Yes
(§10) Herod on his deathbed: Hasmoneans ruled 125 years, to deposing of Antigonus.	$162n - 125 = 37n$ (Hasmoneans used Seleucid Nisan reckoning)	No
(§11) Herod reigned 34 years after Antigonus was slain, but 37 years after declared king by Romans.	$36t - 34 = 2t$ $39t - 37 = 2t$	Yes
(§12) Hyrcanus II, appointed high priest by Pompey in 63 BC, ruled 24 years, followed by Antigonus, 3 years 3 months. Total is 27 years 3 months, agreeing with 27 years from Pompey's capture of Jerusalem to Herod's.	Noninclusive numbering works correctly here and elsewhere in Josephus	Yes
(§13) 28 high priests and 107 years from Antigonus to fall of Jerusalem in AD 70 (see discussion).	$39t + AD\ 69t - 1$ (no year 0) = 107 years	(Yes)

## CONCLUSION

The present article has examined the consequences of two sets of assumptions as applied to the many places in Josephus where he expresses dates for Herod in terms of elapsed years. The discussion

focused on the question of whether Josephus was using inclusive or noninclusive counting, and whether he started the years for Herod in Nisan (the spring) or in Tishri (the fall). There was no attempt, except in occasional incidental ways, to examine the other relevant issues for the chronology of Herod: consular years, Sabbatical years, numismatic evidence, and the year in which Herod's sons considered their reigns to begin. The authors are aware of these other issues, and subsequent studies will show that they are in harmony with the present conclusions.<sup>59</sup> Only the two most prominent positions regarding the chronology of Herod, those often associated with the names of Emil Schürer and W. E. Filmer, were subjected to the present analysis. For the analysis as applied to these positions, results are summarized in two tables. In those tables, the consensus view (Schürer), with its working assumptions about inclusive reckoning and Nisan years, is shown to be inadequate in calculating all elapsed time references in Josephus except §9, whereas the working assumptions of the minority (Filmer) view calculate everything correctly, including §9. Both systems are in disagreement with the 125-year approximation of §10, but the Filmer chronology is in agreement with the more precise figure of 126 years given in §7, whereas the consensus chronology fails that test.

To summarize: The harmony of the chronology advocated here is shown in Table 2, as contrasted with the incoherency of the chronology based on the consensus hypotheses as shown in Table 1. The success of the chronology based on the minority hypotheses substantiates the date of 1 BC for the death of Herod. This, in turn, is in harmony with the date of late 3 or early 2 BC for the birth of our Lord and also with the statement in Luke 3:1, 23 that Jesus was “about thirty years old” when he was baptized in the summer of Tiberius's fifteenth year as emperor (i.e., AD 29).<sup>60</sup> This date for Jesus's birth was accepted by virtually all the Church fathers, with consequent ramifications for the entire chronology of the New Testament.

<sup>59</sup> Andrew E. Steinmann and Rodger C. Young, “Consular Years and Sabbatical Years in the Life of Herod the Great,” *Bibliotheca Sacra*, forthcoming; and “Evidences That Herod the Great's Sons Antedated Their Reigns to a Time before Herod's Death,” *Bibliotheca Sacra*, forthcoming.

<sup>60</sup> If Jesus was born in late 3 BC, he would have turned 30 years old in late AD 28 and would have been about 30¾ years old at his baptism. If he was born in early 2 BC, he would have turned 30 years old in early AD 29 and would have been about 30¼ years old at his baptism.
